

Needs to feed some sort of output circuit with a series cap

Unknown connection

Parts/Info:

- U2 is a quad opamp. PCB marked TL064.
- SMD parts.
- C100 is a through-hole greencap
- Electro's through-hole.
- Unit is powered from 9V battery or 18 to 48V phantom.

The unknowns are as follows:

- Designators for through-hole parts not known. These are marked 100, 101 ... on the schematic
- Not traced: Padding, padding switches, clip circuit, transformer
- Unit has second board which was not traced

Behringer Ultra-G GI100 Cabinet Simulator V1.1, George Giblet, 25 Feb 2021

Big thanks to Klaus (tritonus on FSB) for checking his board and correcting the unknowns.

Traced from glimpses of board from mod video.
